WORLD-CLASS QUALITY ON YOUR ROOF

Canadian Solar conducts rigorous in-house testing in our laboratories to ensure our products are durable and reliable and we regularly submit our products to the world's leading independent testing institutes. We check every one of our products at 478 different checkpoints along the manufacturing process to ensure we make the best quality panels for our customers.

INDUSTRY-LEADING TECHNOLOGY

Canadian Solar ranks among the world-leading companies in terms of solar technology. We have more than 3,000 granted intellectual properties with nearly 600 more pending applications. With more than 250 scientists, engineers and technicians, our Research and Development department continuously strives to develop and deliver high-efficiency solar panels, inverters, and storages, and leads in this constantly evolving industry.

SAFETY FIRST

All our panels, inverters, and components comply with safety certification and all relevant international standards. Canadian Solar is accredited by the Clean Energy Council and all our solar products sold in Australia comply with accordant standards that maximise safety and reliability.

BloombergNEF

No. 1 of Tier 1 Solar Panel Manufacturer in the world

IHS Markit

No. 1 Module Supplier in terms of module quality and price/performance ratio

Top A-Rated bankable PV module supplier

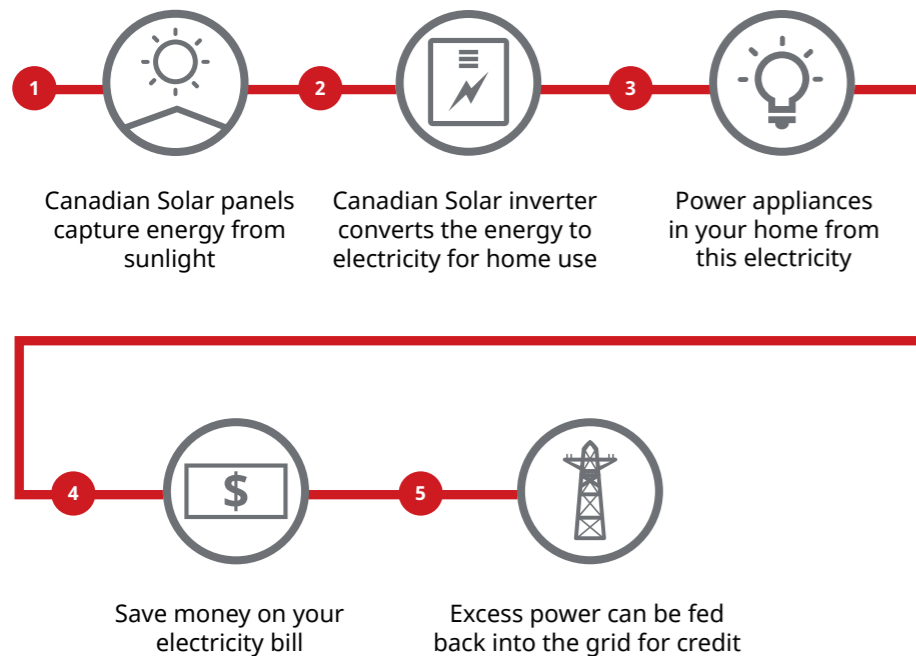

THE MORE ELECTRICITY COSTS, THE MORE YOU NEED SOLAR

Switching to sustainable solar energy will save you money on electricity bills, reduce your carbon footprint as well as improve the value of your home. Utilising your solar power for space heating, home appliances and hot water is cheaper, safer and more environmentally friendly. There is also an additional benefit of your home's temperature being reduced in summer because the solar panels intercept sunlight that would otherwise hit your roof.

HOW SOLAR POWER WORKS

Solar energy is collected from daylight not just sunshine and can be collected year round. Solar power is convenient and attracts both tax incentives and rebates providing immediate savings for you and your family.

SUSTAINABILITY

Canadian Solar has shipped over 75 GW of modules worldwide, and from 2017 to 2021,

- 18% REDUCTION** manufacturing energy intensity
- 36% REDUCTION** manufacturing waste intensity
- 53% REDUCTION** manufacturing water intensity

SOLAR COVERAGE IN AUSTRALIA

More than 3.3 million Australian homes already have rooftop solar* – and that number is increasing weekly

SUSAN AND JOE WANTED TO REDUCE THEIR CARBON FOOTPRINT AND SAVE ON ELECTRICITY BILLS — THEY DECIDED TO GO SOLAR WITH CANADIAN SOLAR IN 2021.

Susan and Joe bought a Canadian Solar system in 2021 and since making the change, they have been really pleased with the results. They installed a 6.66 KW, solar system at their Adelaide home, using the Canadian Solar HiKu CS3L-370MS with black frames, and one 5KW inverter. This system outputs 10,200 kWh per year. Susan and Joe use around 30% of the power generated and export the remaining energy to the grid, which has saved them \$2,972** in the first year. Susan and Joe chose Canadian Solar as their solar system provider as they wanted a company that was reputable and had a strong, long-lasting presence in Australia. They felt confident they could trust Canadian Solar as a brand that would still be around if they ever had warranty issues or needed support.

“SOLAR SYSTEMS ARE MORE AFFORDABLE THAN EVER BUT YOU NEED TO GO WITH A TRUSTED BRAND”
